

# Activity 4: AI-Assisted Release Readiness Assessment

## Purpose

Learn how to use AI to evaluate application readiness before release by reviewing code quality, testing status, documentation, known issues, and deployment risks.

---

## Pre-requisites

- Completion of Activities 1–3
  - Working SmartBank EMI Calculator application
  - VS Code with Cline configured
- 

## Estimated Duration

45 Minutes

---

## Scenario

The SmartBank EMI Calculator has completed development, testing, and code review. The Product Owner has requested a final release readiness assessment before the application is deployed.

As a developer, your responsibility is to use AI to evaluate whether the application is ready for release, identify any remaining risks, and prepare a release recommendation.

**Note:** The objective of this activity is to understand how AI supports release planning and readiness assessment. Actual application deployment is outside the scope of this activity.

---

## Tasks

### Task 1: Review Project Readiness

Analyze the overall status of the application.

### **Suggested Prompt**

Act as a Technical Lead preparing an application for production release.

Review the current Oracle JET EMI Calculator project.

Evaluate:

- Feature completeness
- Code quality
- Application stability
- Maintainability
- Overall project readiness

Summarize your findings before making a release recommendation.

---

## **Task 2: Assess Testing Readiness**

Verify whether sufficient testing has been completed.

### **Suggested Prompt**

Review the EMI Calculator from a testing perspective.

Evaluate:

- Input validation
- Business logic testing
- Boundary condition coverage
- Error handling
- User interface validation

Identify any missing testing areas that should be completed before release.

Do not generate new test cases.

---

## **Task 3: Identify Release Risks**

Use AI to identify risks that could impact production.

### **Suggested Prompt**

Review the current application and identify possible release risks.

Consider:

- Functional risks
- Technical risks
- User experience risks
- Maintainability concerns
- Future scalability
- Known limitations

Classify each risk as:

- High
- Medium
- Low

Recommend actions to reduce each identified risk.

---

## Task 4: Generate a Release Readiness Report

Prepare a professional release assessment.

### Suggested Prompt

Prepare a Release Readiness Report for the SmartBank EMI Calculator.

Include:

- Project summary
- Features completed
- Testing status
- Code review summary
- Known risks
- Recommendations
- Overall release decision

Conclude with one of the following:

- Ready for Release
- Ready with Minor Improvements
- Not Ready for Release

Provide justification for your recommendation.

---

## Expected Deliverables

By the end of this activity, you should have:

- Project Readiness Review
- Testing Assessment
- Risk Analysis
- Release Readiness Report
- Final Release Recommendation
