

Activity 4: Generate Documentation and Code Comments using AI

Purpose

Learn how to use AI to generate meaningful code comments and project documentation. Well-documented code improves readability, simplifies maintenance, and helps new developers quickly understand the application.

Pre-requisites

- Completion of Activities 1, 2 and 3
 - Working EMI Calculator application
 - VS Code with Cline configured
-

Estimated Duration

35–40 Minutes

Scenario

The EMI Calculator is ready for handover to another development team. Before sharing the code, the project must be properly documented so that new developers can understand and maintain it easily.

Use AI to generate comments and documentation for the application.

Tasks

Task 1: Generate File Header Comments

Generate a header comment for the currently opened file.

Suggested Prompt

Generate a professional file header comment for this Oracle JET file.

Include:

- Purpose of the file
- Main functionality
- Author
- Date
- Dependencies (if any)

Do not modify the application logic.

Task 2: Generate Function Documentation

Generate documentation for all functions in the ViewModel.

Suggested Prompt

Review the KnockoutJS ViewModel.

Generate JSDoc comments for every function.

Each comment should include:

- Purpose
- Parameters
- Return value (if applicable)
- Brief description

Do not change the implementation.

Task 3: Add Inline Comments

Generate meaningful inline comments for important sections of the code.

Suggested Prompt

Review the currently opened file.

Add meaningful inline comments only where necessary.

Explain:

- Business logic
- EMI calculation
- Knockout observables
- Event handling

Avoid commenting every line of code.

Task 4: Generate a Project README

Create a README for the EMI Calculator project.

Suggested Prompt

Create a README document for this Oracle JET EMI Calculator project.

Include:

- Project overview
- Features
- Technologies used
- Project structure
- How to run the application
- Future enhancements

Keep the document simple and suitable for beginner developers.

Task 5: Generate a Technical Summary

Prepare a brief technical summary of the application.

Suggested Prompt

Generate a technical summary of the EMI Calculator.

Include:

- Application purpose
- Key Oracle JET components used
- KnockoutJS concepts used
- EMI calculation logic
- Overall application flow

Limit the summary to one page.
